

```
services/supervisor/app/main.py
from models import A2AMessage
from logger import Logger
import os, requests
```

```
POLICYAGENTURL = os.getenv("POLICYAGENTURL", "http://policy-agent:8000")
PROVIDERAGENTURL = os.getenv("PROVIDERAGENTURL", "http://provider-agent:8000")
```

```
logger = Logger()
```

```
def enforcepolicy(policykey, msg):
    r = requests.post(f'{POLICYAGENTURL}/policy/query', json={
        "policykey": policykey,
        "context": msg.context
    })
    res = r.json()
    logger.frameworkinfo("POLICYACCESS", {"policykey": policykey, "version":
res.get("Policy_Version")})
    if res.get("status") != "Active":
        logger.errorfatal("POLICYVIOLATION", {"reason": "missing/deprecated", "policykey":
policykey})
        raise SystemExit(1)
    return res
```

Skeleton HTTP server omitted for brevity; integrate FastAPI or Flask:

- POST /delegate -> applies enforce_policy, forwards to recipient by service DNS name
